Truth & Proof

systematic reasoning for CPS verifying CPS models at scale pragmatics: how to use axiomatics to justify truth structure of proofs and their arithmetic

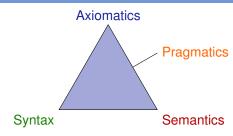

discrete+continuous relation with evolution domains

analytic skills for CPS

Logical Trinity with Extra Leg

Syntax defines the notation

What problems are we allowed to write down?

Semantics what carries meaning.

What real or mathematical objects does the syntax stand for?

Axiomatics internalizes semantic relations into universal syntactic transformations.

Pragmatics how to use axiomatics to justify syntactic rendition of semantical concepts. How to do a proof?

Learning Objectives

Sequent Calculus

 - Creatively Cutting to Transform Questions
- 4 Summary

Definition (Sequent)

$$\Gamma \vdash \Delta$$

has the same meaning as $\bigwedge_{P \in \Gamma} P \to \bigvee_{Q \in \Delta} Q$.

The antecedent Γ and succedent Δ are finite sets of dL formulas.

Definition (Soundness of sequent calculus proof rules)

$$\frac{\Gamma_1 \vdash \Delta_1 \quad \dots \quad \Gamma_n \vdash \Delta_n}{\Gamma \vdash \Delta}$$

is *sound* iff validity of all premises implies validity of conclusion:

If
$$\models (\Gamma_1 \vdash \Delta_1)$$
 and ... and $\models (\Gamma_n \vdash \Delta_n)$ then $\models (\Gamma \vdash \Delta)$

Definition (Sequent)

$$\Gamma \vdash \Delta$$

has the same meaning as $\bigwedge_{P \in \Gamma} P \to \bigvee_{Q \in \Delta} Q$.

The antecedent Γ and succedent Δ are finite sets of dL formulas.

Definition (Soundness of sequent calculus proof rules)

construct proofs up
$$\frac{\Gamma_1 \vdash \Delta_1 \quad \dots \quad \Gamma_n \vdash \Delta_n}{\Gamma \vdash \Delta}$$

is sound iff validity of all premises implies validity of conclusion:

If
$$\models (\Gamma_1 \vdash \Delta_1)$$
 and ... and $\models (\Gamma_n \vdash \Delta_n)$ then $\models (\Gamma \vdash \Delta)$

Definition (Sequent)

$$\Gamma \vdash \Delta$$

has the same meaning as $\bigwedge_{P \in \Gamma} P \to \bigvee_{Q \in \Delta} Q$.

The antecedent Γ and succedent Δ are finite sets of dL formulas.

Definition (Soundness of sequent calculus proof rules)

construct proofs up
$$\Gamma_1 \vdash \Delta_1 \dots \Gamma_n \vdash \Delta_n$$
 validity transfers down $\Gamma \vdash \Delta$

is sound iff validity of all premises implies validity of conclusion:

If
$$\models (\Gamma_1 \vdash \Delta_1)$$
 and ... and $\models (\Gamma_n \vdash \Delta_n)$ then $\models (\Gamma \vdash \Delta)$

Propositional Proof Rules of Sequent Calculus

$$^{\wedge L} \overline{\Gamma, P \wedge Q \vdash \Delta}$$

Propositional Proof Rules of Sequent Calculus

$$\wedge L \frac{\Gamma, P, Q \vdash \Delta}{\Gamma, P \land Q \vdash \Delta}$$

Propositional Proof Rules of Sequent Calculus

$$\wedge L \frac{\Gamma, P, Q \vdash \Delta}{\Gamma, P \land Q \vdash \Delta}$$

 \land L: assume conjuncts separately It successively handles all top-level \land in assumptions but not nested in $A\lor(B\land C)\vdash C$ which needs rules for other propositional operators

$$\wedge$$
R $\Gamma \vdash P \land Q, \Delta$

$$\wedge L \frac{\Gamma, P, Q \vdash \Delta}{\Gamma, P \land Q \vdash \Delta}$$

$$\land \mathsf{R} \ \frac{\Gamma \vdash P, \Delta \quad \Gamma \vdash Q, \Delta}{\Gamma \vdash P \land Q, \Delta}$$

$$\wedge \vdash \frac{\Gamma, P, Q \vdash \Delta}{\Gamma, P \land Q \vdash \Delta}$$

$$\land \mathsf{R} \ \frac{\Gamma \vdash P, \Delta \quad \Gamma \vdash Q, \Delta}{\Gamma \vdash P \land Q, \Delta}$$

$$\wedge L \frac{\Gamma, P, Q \vdash \Delta}{\Gamma, P \land Q \vdash \Delta}$$

∧R: prove conjuncts separately

$$\land \mathsf{R} \ \frac{\Gamma \vdash P, \Delta \quad \Gamma \vdash Q, \Delta}{\Gamma \vdash P \land Q, \Delta} \qquad \forall \mathsf{R} \ \frac{}{\Gamma \vdash P \lor Q, \Delta}$$

$$\wedge L \frac{\Gamma, P, Q \vdash \Delta}{\Gamma, P \land Q \vdash \Delta}$$

$$\land \mathsf{R} \ \frac{\Gamma \vdash P, \Delta \quad \Gamma \vdash Q, \Delta}{\Gamma \vdash P \land Q, \Delta} \qquad \forall \mathsf{R} \ \frac{\Gamma \vdash P, Q, \Delta}{\Gamma \vdash P \lor Q, \Delta}$$

$$\wedge L \frac{\Gamma, P, Q \vdash \Delta}{\Gamma, P \land Q \vdash \Delta}$$

$$\wedge \mathsf{R} \ \frac{\Gamma \vdash P, \Delta \quad \Gamma \vdash Q, \Delta}{\Gamma \vdash P \land Q, \Delta} \qquad \forall \mathsf{R} \ \frac{\Gamma \vdash P, Q, \Delta}{\Gamma \vdash P \lor Q, \Delta}$$

$$\wedge L \frac{\Gamma, P, Q \vdash \Delta}{\Gamma, P \land Q \vdash \Delta}$$

∨R: split disjunctions in succedent where comma has a disjunctive meaning

$$\wedge \mathsf{R} \ \frac{\Gamma \vdash P, \Delta \quad \Gamma \vdash Q, \Delta}{\Gamma \vdash P \land Q, \Delta} \qquad \forall \mathsf{R} \ \frac{\Gamma \vdash P, Q, \Delta}{\Gamma \vdash P \lor Q, \Delta}$$

Lemma

$$\land R \ \frac{\Gamma \vdash P, \Delta \quad \Gamma \vdash Q, \Delta}{\Gamma \vdash P \land Q, \Delta} \ \textit{is sound}$$

Lemma

$$\land R \ \frac{\Gamma \vdash P, \Delta \quad \Gamma \vdash Q, \Delta}{\Gamma \vdash P \land Q, \Delta} \ \textit{is sound: conclusion valid if all premises valid.}$$

Lemma

 $\wedge R = \frac{\Gamma \vdash P, \Delta \quad \Gamma \vdash Q, \Delta}{\Gamma \vdash P \land Q, \Delta}$ is sound: conclusion valid if all premises valid.

Proof using $[\![P \land Q]\!] = [\![P]\!] \cap [\![Q]\!]$

WLOG: $\omega \in \llbracket G \rrbracket$ for all $G \in \Gamma$ and $\omega \not\in \llbracket D \rrbracket$ for all $D \in \Delta$ (why?)

By premise: $\omega \in \llbracket \Gamma \vdash P, \Delta \rrbracket$ and $\omega \in \llbracket \Gamma \vdash Q, \Delta \rrbracket$

By WLOG: $\omega \in \llbracket P \rrbracket$ and $\omega \in \llbracket Q \rrbracket$

By semantics: $\omega \in \llbracket P \wedge Q
rbracket$

By definition: $\omega \in \llbracket \Gamma \vdash P \land Q, \Delta \rrbracket$

dL sequent calculus is sound: every dL formula with a proof is valid.

dL sequent calculus is sound: every dL sequent with a proof is valid.

Proof (by induction on structure of sequent calculus proof).

dL sequent calculus is sound: every dL sequent with a proof is valid.

Proof (by induction on structure of sequent calculus proof).

Proofs without rule uses only prove dL axioms, which are sound.

dL sequent calculus is sound: every dL sequent with a proof is valid.

Proof (by induction on structure of sequent calculus proof).

- Proofs without rule uses only prove dL axioms, which are sound.
- Sequent proof ends with some proof step:

$$\frac{\Gamma_1 \vdash \Delta_1 \quad \dots \quad \Gamma_n \vdash \Delta_n}{\Gamma \vdash \Delta}$$

The subproof of each premise $\Gamma_i \vdash \Delta_i$ is smaller, so $\vDash \Gamma_i \vdash \Delta_i$ by IH. All dL proof rules are proved sound, also the one used above, i.e.:

If
$$\models (\Gamma_1 \vdash \Delta_1)$$
 and \dots and $\models (\Gamma_n \vdash \Delta_n)$ then $\models (\Gamma \vdash \Delta)$

Thus,
$$\vDash (\Gamma \vdash \Delta)$$
.

dL sequent calculus is sound: every dL sequent with a proof is valid.

Proof (by induction on structure of sequent calculus proof).

- Proofs without rule uses only prove dL axioms, which are sound.
- Sequent proof ends with some proof step:

$$\frac{\Gamma_1 \vdash \Delta_1 \quad \dots \quad \Gamma_n \vdash \Delta_n}{\Gamma \vdash \Delta}$$

The subproof of each premise $\Gamma_i \vdash \Delta_i$ is smaller, so $\vDash \Gamma_i \vdash \Delta_i$ by IH. All dL proof rules are proved sound, also the one used above, i.e.:

If
$$\models (\Gamma_1 \vdash \Delta_1)$$
 and ... and $\models (\Gamma_n \vdash \Delta_n)$ then $\models (\Gamma \vdash \Delta)$

Thus,
$$\vDash (\Gamma \vdash \Delta)$$
.

Now adopt is sound!

 $\mathsf{FOL}_\mathbb{R}$ decidable, so side condition implementable:

$$\mathbb{R} \ \ \overline{\Gamma \vdash \Delta} \qquad (\textit{if} \ \bigwedge_{P \in \Gamma} P \rightarrow \bigvee_{Q \in \Delta} Q \textit{ is valid in } \mathsf{FOL}_{\mathbb{R}})$$

$$\mathbb{R} \overline{a > 0, b > 0} \vdash y \ge 0 \to ax^2 + by \ge 0$$

$$\mathbb{R}\overline{x^2 > 0 \vdash x > 0}$$

 $\mathsf{FOL}_\mathbb{R}$ decidable, so side condition implementable:

$$\mathbb{R} \ \ \overline{\Gamma \vdash \Delta} \qquad (\textit{if} \ \bigwedge_{P \in \Gamma} P \rightarrow \bigvee_{Q \in \Delta} Q \textit{ is valid in } \mathsf{FOL}_{\mathbb{R}})$$

$$\mathbb{R}\overline{a>0,b>0\vdash y\geq 0\rightarrow ax^2+by\geq 0}$$

$$\mathbb{R}\overline{x^2 > 0 \vdash x > 0}$$

 $\mathsf{FOL}_\mathbb{R}$ decidable, so side condition implementable:

$$\mathbb{R} \ \ \overline{\Gamma \vdash \Delta} \qquad (if \bigwedge_{P \in \Gamma} P \to \bigvee_{Q \in \Delta} Q \ \textit{is valid in} \ \mathsf{FOL}_{\mathbb{R}})$$

$$\mathbb{R} \overline{a>0,b>0 \vdash y\geq 0 \rightarrow ax^2+by\geq 0}$$

$$\frac{\text{false}}{\mathbb{R}^2 \times 0 \vdash x > 0}$$

 $\mathsf{FOL}_\mathbb{R}$ decidable, so side condition implementable:

$$\mathbb{R} \ \ \overline{\Gamma \vdash \Delta} \qquad (if \bigwedge_{P \in \Gamma} P \to \bigvee_{Q \in \Delta} Q \text{ is valid in } \mathsf{FOL}_{\mathbb{R}})$$

Theorem (Tarski's quantifier elimination)

 $\mathsf{FOL}_\mathbb{R}$ admits quantifier elimination: there is an algorithm that computes a quantifier-free formula $\mathsf{QE}(P)$, for each first-order real arithmetic formula P, that is equivalent, i.e., $P \leftrightarrow \mathsf{QE}(P)$ is valid.

 $\mathsf{FOL}_\mathbb{R}$ decidable, so side condition implementable:

$$\mathbb{R} \ \ \overline{\Gamma \vdash \Delta} \qquad (if \bigwedge_{P \in \Gamma} P \to \bigvee_{Q \in \Delta} Q \text{ is valid in } \mathsf{FOL}_{\mathbb{R}})$$

* false
$$\mathbb{R}$$
 $a > 0, b > 0 \vdash y \ge 0 \rightarrow ax^2 + by \ge 0$ \mathbb{R} $x^2 > 0 \vdash x > 0$

Theorem (Tarski's quantifier elimination)

 $\mathsf{FOL}_\mathbb{R}$ admits quantifier elimination: there is an algorithm that computes a quantifier-free formula $\mathsf{QE}(P)$, for each first-order real arithmetic formula P, that is equivalent, i.e., $P \leftrightarrow \mathsf{QE}(P)$ is valid.

What if there are no quantifiers?

Lemma (ℝ real arithmetic)

 $\mathsf{FOL}_\mathbb{R}$ decidable, so side condition implementable:

$$\mathbb{R} \ \ \overline{\Gamma \vdash \Delta} \qquad (if \bigwedge_{P \in \Gamma} P \to \bigvee_{Q \in \Delta} Q \text{ is valid in } \mathsf{FOL}_{\mathbb{R}})$$

Theorem (Tarski's quantifier elimination)

 $\mathsf{FOL}_\mathbb{R}$ admits quantifier elimination: there is an algorithm that computes a quantifier-free formula $\mathsf{QE}(P)$, for each first-order real arithmetic formula P, that is equivalent, i.e., $P \leftrightarrow \mathsf{QE}(P)$ is valid.

What if there are no quantifiers? Universal closure with $\forall \frac{\Gamma \vdash \forall x P, \Delta}{\Gamma \vdash P, \Delta}$

$$\forall R \ \overline{\vdash \forall d \ (d \ge -x \to [x := 0 \cup x := x + d] \ x \ge 0)}$$

$$\forall R \ \overline{\vdash \forall d (d \ge -x \to [x := 0 \cup x := x + d] \, x \ge 0)}$$

Not a $\mathsf{FOL}_\mathbb{R}$ formula so Tarski's quantifier elimination not applicable.

$$\stackrel{[\cup]}{\vdash} \frac{\vdash d \ge -x \to [x := 0 \cup x := x + d] \, x \ge 0}{\vdash \forall \frac{d}{d} \, (d \ge -x \to [x := 0 \cup x := x + d] \, x \ge 0)}$$

$$\begin{bmatrix}
[:=] \\
\vdash d \ge -x \to [x:=0] \\
x \ge 0 \land [x:=x+d] \\
x \ge 0
\end{bmatrix}$$

$$\vdash d \ge -x \to [x:=0 \cup x:=x+d] \\
x \ge 0$$

$$\vdash \forall d (d \ge -x \to [x:=0 \cup x:=x+d] \\
x \ge 0$$

$$\begin{array}{l}
[:=] \\
\vdash d \ge -x \to 0 \ge 0 \land [x := x + d] x \ge 0 \\
[:=] \\
\vdash d \ge -x \to [x := 0] x \ge 0 \land [x := x + d] x \ge 0 \\
\vdash d \ge -x \to [x := 0 \cup x := x + d] x \ge 0 \\
\vdash \forall d (d \ge -x \to [x := 0 \cup x := x + d] x \ge 0)
\end{array}$$

Quantifier Elimination After Universal Closure

$$\begin{array}{l}
\stackrel{\text{if}}{\forall} \quad \vdash \forall d \ (d \ge -x \to 0 \ge 0 \land x + d \ge 0) \\
\vdash d \ge -x \to 0 \ge 0 \land x + d \ge 0 \\
\stackrel{\text{[:=]}}{\vdash} \vdash d \ge -x \to 0 \ge 0 \land [x := x + d] x \ge 0 \\
\stackrel{\text{[:=]}}{\vdash} \vdash d \ge -x \to [x := 0] x \ge 0 \land [x := x + d] x \ge 0 \\
\vdash d \ge -x \to [x := 0 \cup x := x + d] x \ge 0 \\
\vdash \forall d \ (d \ge -x \to [x := 0 \cup x := x + d] x \ge 0
\end{array}$$

Quantifier Elimination After Universal Closure

Quantifier Elimination After Universal Closure

$$\mathbb{R} \xrightarrow{\vdash \forall x \forall d (d \ge -x \to 0 \ge 0 \land x + d \ge 0)} \xrightarrow{\vdash \forall d (d \ge -x \to 0 \ge 0 \land x + d \ge 0)} \xrightarrow{\vdash \forall d (d \ge -x \to 0 \ge 0 \land x + d \ge 0)} \xrightarrow{\vdash \forall d (d \ge -x \to 0 \ge 0 \land x + d \ge 0} \xrightarrow{\vdash d \ge -x \to 0 \ge 0 \land [x := x + d] x \ge 0} \xrightarrow{\vdash d \ge -x \to [x := 0] x \ge 0 \land [x := x + d] x \ge 0} \xrightarrow{\vdash \forall d (d \ge -x \to [x := 0 \cup x := x + d] x \ge 0} \xrightarrow{\vdash \forall d (d \ge -x \to [x := 0 \cup x := x + d] x \ge 0}$$

$$\mathbb{R} \xrightarrow{|\forall} \frac{*}{\vdash \forall x \forall d (d \ge -x \to 0 \ge 0 \land x + d \ge 0)} \xrightarrow{\vdash \forall d (d \ge -x \to 0 \ge 0 \land x + d \ge 0)} \xrightarrow{\vdash \forall d (d \ge -x \to 0 \ge 0 \land x + d \ge 0)} \xrightarrow{\vdash d \ge -x \to 0 \ge 0 \land x + d \ge 0} \xrightarrow{\vdash d \ge -x \to 0 \ge 0 \land [x := x + d] x \ge 0} \xrightarrow{\vdash d \ge -x \to [x := 0] x \ge 0 \land [x := x + d] x \ge 0} \xrightarrow{\forall \exists} \frac{\vdash d \ge -x \to [x := 0 \cup x := x + d] x \ge 0}{\vdash \forall d (d \ge -x \to [x := 0 \cup x := x + d] x \ge 0)}$$

We could also leave $\forall d$ alone and use axioms in the middle of the formula.

$$\mathbb{R} \xrightarrow{|\forall} \frac{*}{\vdash \forall x \forall d (d \ge -x \to 0 \ge 0 \land x + d \ge 0)} \xrightarrow{\vdash \forall d (d \ge -x \to 0 \ge 0 \land x + d \ge 0)} \xrightarrow{\vdash d \ge -x \to 0 \ge 0 \land x + d \ge 0} \xrightarrow{\vdash d \ge -x \to 0 \ge 0 \land [x := x + d] x \ge 0} \xrightarrow{\vdash d \ge -x \to [x := 0] x \ge 0 \land [x := x + d] x \ge 0} \xrightarrow{\vdash d \ge -x \to [x := 0 \cup x := x + d] x \ge 0} \xrightarrow{\vdash \forall d (d \ge -x \to [x := 0 \cup x := x + d] x \ge 0} \xrightarrow{\vdash \forall d (d \ge -x \to [x := 0 \cup x := x + d] x \ge 0}$$

Already use rule $\mathbb R$ for valid $FOL_{\mathbb R}$ formulas with free variables before $i\forall$

Derived rule: rule that can be proved using other proof rules.

Weakening by Removing Assumptions

WR
$$\frac{\Gamma \vdash \Delta}{\Gamma \vdash P, \Delta}$$
WL $\frac{\Gamma \vdash \Delta}{\Gamma, P \vdash \Delta}$

$$\frac{r \ge 0 \vdash 0 \le r \le r}{A, r \ge 0 \vdash 0 \le r \le r}$$

Throw big arithmetic distraction *A* away by weakening since the proof is independent of formula *A*.

Occam's assumption razor

Think how hard it would be to prove a theorem with all the facts in all books of mathematics as assumptions.

Compared to a proof from just the two facts that matter.

$$a \ge 0, t \ge 0, 0 \le \underbrace{\frac{a}{2}t^2 + vt + x}_{z}, \underbrace{\frac{a}{2}t^2 + vt + x}_{z} \le d, d \le 8 \vdash \underbrace{\frac{a}{2}t^2 + vt + x}_{z} \le 8$$

Abbreviate fancy term $\frac{a}{2}t^2 + vt + x$ by new variable z makes it easy:

$$a \ge 0, t \ge 0, 0 \le z, z \le d, d \le 8 \vdash z \le 8$$

$$a \ge 0, t \ge 0, 0 \le \underbrace{\frac{a}{2}t^2 + vt + x}_{z}, \underbrace{\frac{a}{2}t^2 + vt + x}_{z} \le d, d \le 8 \vdash \underbrace{\frac{a}{2}t^2 + vt + x}_{z} \le 8$$

Abbreviate fancy term $\frac{a}{2}t^2 + vt + x$ by new variable z makes it easy:

$$a \ge 0, t \ge 0, 0 \le z, z \le d, d \le 8 \vdash z \le 8$$

Proof rules introducing such new variables will be studied in Chapter 12

$$a \ge 0, t \ge 0, 0 \le \underbrace{\frac{a}{2}t^2 + vt + x}_{z}, \underbrace{\frac{a}{2}t^2 + vt + x}_{z} \le d, d \le 8 \vdash \underbrace{\frac{a}{2}t^2 + vt + x}_{z} \le 8$$

Abbreviate fancy term $\frac{a}{2}t^2 + vt + x$ by new variable z makes it easy:

$$a \ge 0, t \ge 0, 0 \le z, z \le d, d \le 8 \vdash z \le 8$$

Proof rules introducing such new variables will be studied in • Chapter 12 Inverse of a derived rule that turns assignments into equations:

$$[:=]_{=} \frac{\Gamma, y = e \vdash p(y), \Delta}{\Gamma \vdash [x := e]p(x), \Delta}$$

$$a \ge 0, t \ge 0, 0 \le \underbrace{\frac{a}{2}t^2 + vt + x}_{z}, \underbrace{\frac{a}{2}t^2 + vt + x}_{z} \le d, d \le 8 \vdash \underbrace{\frac{a}{2}t^2 + vt + x}_{z} \le 8$$

Abbreviate fancy term $\frac{a}{2}t^2 + vt + x$ by new variable z makes it easy:

$$a \ge 0, t \ge 0, 0 \le z, z \le d, d \le 8 \vdash z \le 8$$

Proof rules introducing such new variables will be studied in • Chapter 12 Inverse of a derived rule that turns assignments into equations:
